Tester Name: Mehreen Iftikhar Testing website:Varsik	URL: https://varsikapp.com/#	Execution Date 25/5/2026 Version(0.0.1)

Bug ID	Located	Summary	Steps to Reproduce	Expected Result	Actual Result	Priority	Severity	Issue Type	Platform	Evidence	Reference Link
BUG-001	Mobile Navigation Menu Layer	Anchor links inside the responsive hamburger menu e.g., "About" fail to trigger page scroll or collapse the menu drawer on mobile devices.	1. Open the website on a mobile device or emulator e.g., iPhone 14 Pro. 2. Click on the three-line Hamburger Icon to open the menu drawer. 3. Click on the "About" navigation item.	The menu drawer should auto collapse, and the viewpoint should smoothly scroll down to the About The Ap section	The click registers but nothing happens; the view remains static inside the open mobile menu layer.	High	Blocker	Functional Bug	Mobile Responsive	https://www.loom.com/share/c63db3abf84d4f65b57d9a2c0feb3e0f	
BUG-002	Mobile Header Navigation Bar	Close icon X and original Hamburger icon display simultaneously and overlap upon opening the mobile menu drawer.	1. Load varsikapp.com on a mobile device viewpoint. 2. Tap on the Hamburger menu icon. 3. Observe the top-right corner of the header area.	The hamburger icon should toggle into a single, cleanly aligned close button X.	The "X" overlay icon sits directly on top of/beside the unhidden background hamburger lines, creating a visual layout clutter.	Medium	Medium	UI/UX Bug	Mobile Responsive	https://loom.com/i/2d3befb95bd74be7982ab2c42f0017f0	
BUG-003	Mobile Homepage	The core Call to Action app store buttons are pushed below the fold due to excessive vertical padding/margin, hiding critical conversion elements on initial page load.	1. Open varsikapp.com on a mobile device or emulator e.g., iPhone 14 Pro. 2.Observe the landing view before performing any scroll action. 3.Scroll down slightly to see where the buttons are placed.	The main heading, descriptive sub-text, and both App Store/Google Play badges should be tightly grouped and fully visible inside the initial viewport height to capture immediate downloads.	The store badges are cut off and pushed entirely out of view on initial load, forcing the user to manually scroll to discover the primary actions.	Medium	Medium	UI/UX Responsive	Mobile Responsive	https://loom.com/i/i40691b669a084d2888be4ee08f3d2378	
BUG-004	Mobile Homepage, About section	The main section heading suffers from improper text scaling, causing awkward character/word wrapping, and the bulleted "Key Points" list feels visually cramped on mobile screen sizes.	1. Open the website on a mobile responsive device or emulator framework e.g., iPhone 14 Pro. 2. Scroll down to the "ABOUT THE APP" section block. 3. Observe the line wrap on the word "Destiny" and the alignment of the bullet points under Key Points.	The typography system should adjust dynamically on small screens using fluid font sizes. The entire heading "Your Personal Guide To Fortune & Destiny" should wrap naturally, and the key points list should have consistent padding and vertical breathing space.	The ampersand is pushed clumsily to the line above, leaving the word Destiny completely isolated on the final text line. The padding left on the unordered bulleted list shifts excessively to the left margin, squeezing the readability structure of the app features list.	Medium	Minor	UI/UX Responsive	Mobile Responsive	https://loom.com/i/a5161198b1ee4860bc9fcafe646bc546	
BUG-005	Mobile Homepage, "How It Works" Section	he first card "Create Your Profile"renders in a prominent bright blue active color state, implying interactivity, but remains completely non-clickable and structurally static on mobile devices.	1. Navigate down to the "HOW IT WORKS" section on a mobile viewport. 2. Tap/click repeatedly on the highlighted blue block labeled "01 Create Your Profile". 3. Attempt to tap on card 02 or 03 to see if the active highlight toggles or changes state.	Either all workflow cards should maintain a uniform, balanced background system if they are completely static informative blocks, or clicking cards 02, 03, and 04 should dynamically toggle the active blue state highlight to guide the user sequence.	Only card 01 stays hardcoded with a highly saturated blue background. It feels like a broken clickable link or an un-switchable interactive block that yields no reaction upon touch input.	Medium	Medium	Functional Bug	Mobile Responsive	https://www.loom.com/share/61c658bee4424d9689043d7f9112a91a	
BUG-006	Mobile Homepage, Pricing Subscription Section	The pricing amount layer and its frequency billing label "Per Month" suffer from overlapping tight margin constraints, alongside cramped gap layouts between stacked subscription blocks on mobile screens.	1.Open the website on a mobile responsive simulation setup e.g., iPhone 14 Pro. 2. Scroll to the pricing grid labeled "Upgrade For Unlimited Insights". 3. Observe the layout gap under the $14.99 value string and the margin separating it from the card below.	Proper breathing whitespace hierarchy margin bottom or flex gap system should safely separate the dollar price value from its frequency label, and individual subscription containers should have clean, isolated separation buffers.	The text Per Month is awkwardly squeezed directly underneath the center-right margin baseline of $14.99, creating poor typography tracking.	Medium	Minor	UI/UX Responsive	Mobile Responsive	https://loom.com/i/i04cb1848f2dd449e89e70e2a2c6424b6	
BUG-007	Mobile Navigation Menu Drawer, Small Viewports	The navigation font links inside the mobile hamburger menu scale down aggressively on small viewports, making the text unreadable and violating mobile touch target accessibility standards.	1. Open the website using a legacy/small smartphone viewpoint emulator e.g., iPhone 5/SE with a baseline width of 320px. 2. Click the hamburger menu icon to expand the sidebar drawer overlay. 3. Observe the font dimensions and cumulative physical size of the vertical links "Home", "About", etc..	Text elements should maintain a legible base font configuration Minimum 16px for standard mobile navigation text blocks and supply adequate vertical tap targets Minimum target size of 44px x 44px per WCAG guidelines to facilitate thumb clicks.	The navigation font sizes collapse dramatically down to roughly 8px or 10px. The links appear as a tiny, cramped block of text on the left margin, destroying visibility and mobile interactivity.	High	Major	UI/UX Accessibility Defect	Mobile Responsive	https://loom.com/i/df8eb4aa8eda43208eda098481390bff	
BUG-008	Mobile Homepage, "Join Our Community" Section	The section heading exhibits a severe missing space bug between style tags, the body copy text collapses below legible readability levels, and the application graphic mockup gets clipped along the screen border	1. Open the website using a 320px wide viewport emulator (e.g., iPhone 5/SE). 2. Scroll down to the section titled "JOIN OUR COMMUNITY". 3. Inspect the main section heading, descriptive list elements, and the smartphone mockup image below it.	Word combinations should maintain clear grammatical inline spacing. Text scaling layouts should never drop below a legible 14px standard layout system, and graphic image assets should downscale fluidly max-width: 100% without clipping boundaries.	The text displays as "ConnectionsBeyond" The structural word space between the white and blue inline spans is completely missing. The paragraph copy text, community feature list headings, and bullets compress into sub-standard microscopic sizes. The smartphone interface graphic mockup element at the bottom fails container restrictions and is clipped on both sides.	High	Major	UI/UX Responsive Failure	Mobile Responsive	https://loom.com/i/i5b2ca04f9fd841c8aadf4987b15de153	
BUG-009	Homepage Hero Section	The "Get it on Google Play" button badge is entirely static, missing its hyperlink reference configuration, and fails to initiate any redirection routing.	1. Access the landing page varsikapp.com. 2. Navigate to the main Hero section on the desktop view. 3. Click directly on the white "Get it on Google Play" store badge.	Clicking the badge should immediately redirect the user or open a new browser tab routing to the official Android Google Play Store listing for the app.	The cursor updates to a pointer target state on hover, but clicking the element results in absolute dead action no link triggers and no page execution occurs.	Critical	Blocker	Functional Defect	Cross Platform	https://loom.com/i/ff968e07576946cf9adb138e7c102ae1	
BUG-010	Homepage Hero Section	The "Download on the App Store" graphic badge operates as a static visual block with a dead click event configuration.	1. Load the website address varsikapp.com. 2. Locate the primary sub content column containing download badges. 3. Click directly on the white "Download on the App Store" badge.	The element should transition the web user directly to the Apple App Store marketplace interface via a verified routing anchor url	The element registers the click behavior statically without activating any hyperlink script, rendering the button useless for iOS users.	Critical	Blocker	Functional Defect	Cross Platform (Desktop & Mobile Viewports)	https://loom.com/i/ff968e07576946cf9adb138e7c102ae1	
BUG-011	Global Navigation Header Menu Bar	The primary pill shaped "Download The App" button embedded into the global header fails to execute any dynamic page scroll script or target page routing layer.	1. Open the live deployment URL varsikapp.com. 2. Move the view focus up to the top right corner of the permanent header area. 3. Click on the bordered pill action item labeled "Download The App".	Clicking the header action button should smoothly scroll the page view down to the dedicated download section/store buttons or handle an external link routing rule.	The page layer ignores the interaction entirely. The site contents remain completely static without throwing loading animations or changing view position coordinates.	Critical	Blocker	Functional Defect	Cross Platform (Desktop & Mobile Viewports)	https://loom.com/i/ff968e07576946cf9adb138e7c102ae1	
BUG-012	Homepage, "Get In Touch With Us!" Section, Contact Form Component	The "Your Name" input field lacks proper character type validation, allowing alphanumeric characters and numbers (e.g., "m12") to be accepted without throwing a validation error.	1. Scroll down to the "Get In Touch With Us!" contact form section. 2. Click inside the primary input text field labeled "Your Name". 3. Enter an invalid name string containing digits or special symbols (e.g., input "m12"). 4. Fill out the remaining parameters with valid strings and click the "Submit" button.	The application layer should reject alphanumeric or purely numeric sequences in name entries, blocking submission and rendering an explicit validation error message e.g., "Name should only contain alphabetic characters".	The field accepts the value without any input restriction, allowing invalid data formats to pass through the UI level seamlessly.	Medium	Medium	Data Validation Error	Cross-Platform (Desktop & Mobile Viewports)	https://loom.com/i/d8fbc296b4104a5c9b2f11811ca95076	
BUG-013	Contact Us Section & Footer Blocks	While the functional native protocols are correctly implemented and trigger external device actions, the actual visible contact data contains unofficial dummy sequence properties Yahoo mail domain and suspicious placeholder phone numbers.	1. Scroll down to the website footer or navigate to the active Contact section grid. 2. Inspect the visible string mapped for support communication channels.	Valid and official production-ready enterprise communications channels should be exposed (e.g., support@varsikapp.com or info@varsikapp.com).	The native redirection logic runs smoothly, but users are prompted to contact a generic unverified personal account layout (Varsikapp@yahoo.com) and an unformatted generic number string (5392222322).	Medium	Medium	Data Validation	Cross-Platform (Desktop & Mobile Viewports)	https://loom.com/i/30d51f09a47c4a10b7f3735ddb9292b9	
BUG-014	Homepage, "How It Works" Section, Card 04	Card 04 description copy starts with a visible spelling mistake: 'receive' instead of 'Receive'.	1. Navigate to 'How It Works' section. 2. Read text inside 4th block 'Get Your Reading'.	Text should be spell-checked: 'Receive your personalized insights...'	Character 'R' is missing; reads 'eceive your personalized...'	Low	Minor	Text QA / Typo	Cross-Platform	https://loom.com/i/63ab9442c8684b9eb07bd320aab40b52	
BUG-015	Homepage, Pricing Section Table	The recurring billing labels across monthly, 6-month, and yearly cards utilize inconsistent naming conventions and cases.	1. Scroll down to pricing blocks. 2. Compare sub-text under dollar amounts ($14.99, $59.99, $99.99).	Consistent standardized labeling e.g., Month, / 6 Months, / Year.	Card 1 uses Per Month, Card 2 uses 6 Month lowercase m, no plural s, Card 3 uses 'Per year' (lowercase 'y').	Low	Minor	UI Inconsistency	Cross-Platform	https://loom.com/i/c5a068819713497ca812b03f2799188c
